

Névio Costa Magagnin

Junior full-stack developer

About me

I like so much working with software development, this started when I was 15 years old in a presencial course with duration of 3 years. Since there, I always try to improve my skill set with online courses, forums and online documentations.

I am bit shy, but when I want something I go after that without fear. I always trying my best to impress my seniors co-workers and learn of them the bests ways to improve myself as a developer.

Fun fact: I always have workout every day to take a rest of work, thatas is my meditation. 😊

Education

High School

since fev/2018 until dec/2020

Projects

Hand Detector

The hand detector using Python is a project that I created to study Python programming with bests practices. It was finished in about 2 weeks and has 3 modes of detector: the counter, volume controller and object moving mode.

Snake Game

Another Python project to learn much more about Python programming, POO with Python and of course, to have fun while testing it!

User Interface Prototype

This UI was created by me using React Native to improve my front-end skills in styling interfaces. I used styled-components to style it and reusable components in the screens.

Via Notes

This project is a full-stack test that Vialaser company passed to me in order to get a front-end job in the company. I had one week to complete it, but I actually finished in four days only programming at night.

My skills

HTML - CSS - JavaScript - Node
advanced

React - React Native - TypeScript
advanced

Angular - Ionic
medium

Python
beginner

MySQL - MongoDB
medium

Git - GitHub - GitLab
medium

Unit Tests in React
beginner

Linux - WSL
medium

UX - UI
beginner

Amazon Web Services (AWS)
beginner

English
B2 level
